Purpose

This section describes how to provide data to the **PEH Data Platform**.

It focuses on:

- required input structures
- data validation: supported checks and inspections
- known limitations

Conceptual workflow

Providing data to the PEH Data Platform typically follows these steps:

1. The data provider signs the Protocol
2. A codebook is prepared together with the data platform manager
3. The data platform build the project configuration in the PEH Data Platform
4. The data provider receives a tailored data template to provide the data
5. The data provider requests a user account to the PEH Data Platform
6. The data provider runs services in the PEH Data Platform on the filled out data template:

- data validation
- data enrichment
- summary statistics

7. The data provider inspects the outputs and upon approval, proceeds to data upload to the PEH Data Platform

Limitations and responsibilities

! Important

The PEH Data Platform is a **supporting tool**.

It does **not**: - guarantee regulatory or ethical compliance - detect conceptual errors in study design - replace formal data submission checks

Responsibility for data quality remains with the data provider.
